INTRODUCTION TO DMS

1.1 WHAT IS DMS

- DMS is web application which helps to company and dealer to manage their products and other delivery related activity.
- DMS stated for Dealership Management System.

1.2 USER OF DMS

- DMS have three types of Users.
  - Superadmin
  - Dealer
  - Salesman

Superadmin:

- Dealer Management
- Help dealer to distribute product to retailer
- Retails sales analysis

Dealer:

- Order products form company
- Distributes purchased products to retailer with help of salesman
- Sales analysis

Salesman:

- Visit retail's shop and punch sale order

1.3 FLOW OF DMS

- We have appropriate flow to supply product from company to customer.

Superadmin:

- Create Dealer
- Create Product
- Product and rate setup
- Assign product to dealer

Dealer:

- Purchase products
- Create Routes
- Create Party
- Appoint Salesman
- Assign Routes to Salesman

Salesman:

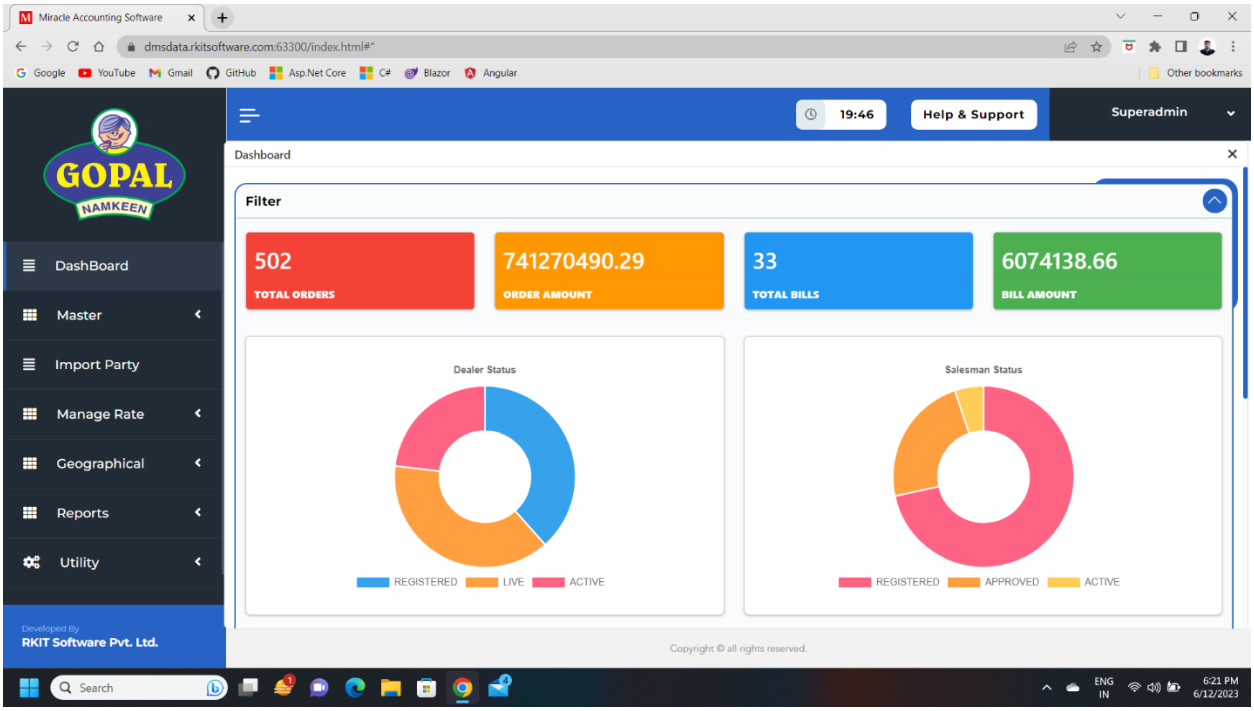

- Get Registration
- Visit Retail Shop
- Punch sales orders

DASHBOARD(SUPERAMDIN)

2.1 INTRODUCTION

- Dashboard divide into two part.
  - Charts
  - Reports

Charts:

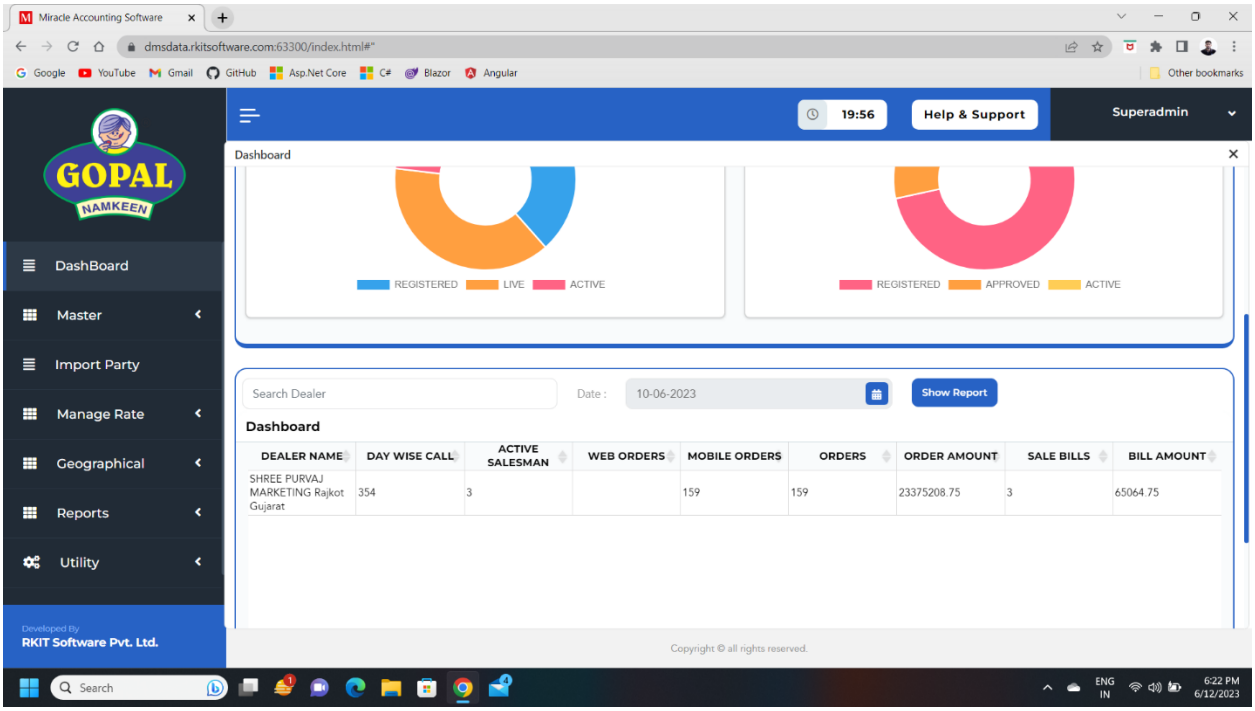

- In chart part first we have 4 counter
  - Total order
  - Order amount
  - Total bill
  - Bill amount
- All counter show details of a day, every day it's update.
- Another component is we have 2 chart which is,
  - Dealer status
    - Registered:
      - How many dealer register in this day

- Live:
  - How many dealer have rights of live stock, if live stock is enable in dealer the dealer don’t billing in negative stock.
- Active:
  - How many dealers logged in today.

- Salesman status
  - Registered:
    - How many salesman registered.
  - Approved:
    - How many salesman approved for work by dealer.
  - Active:
    - How many salesman logged in today.

Reports:

- In this section we get one table, which container different types of information like,
  - Dealer name
  - Day wise call
  - Active salesman
  - Web order

- Mobile order
- Orders
- Order Amount
- Sale bill
- Bill amount

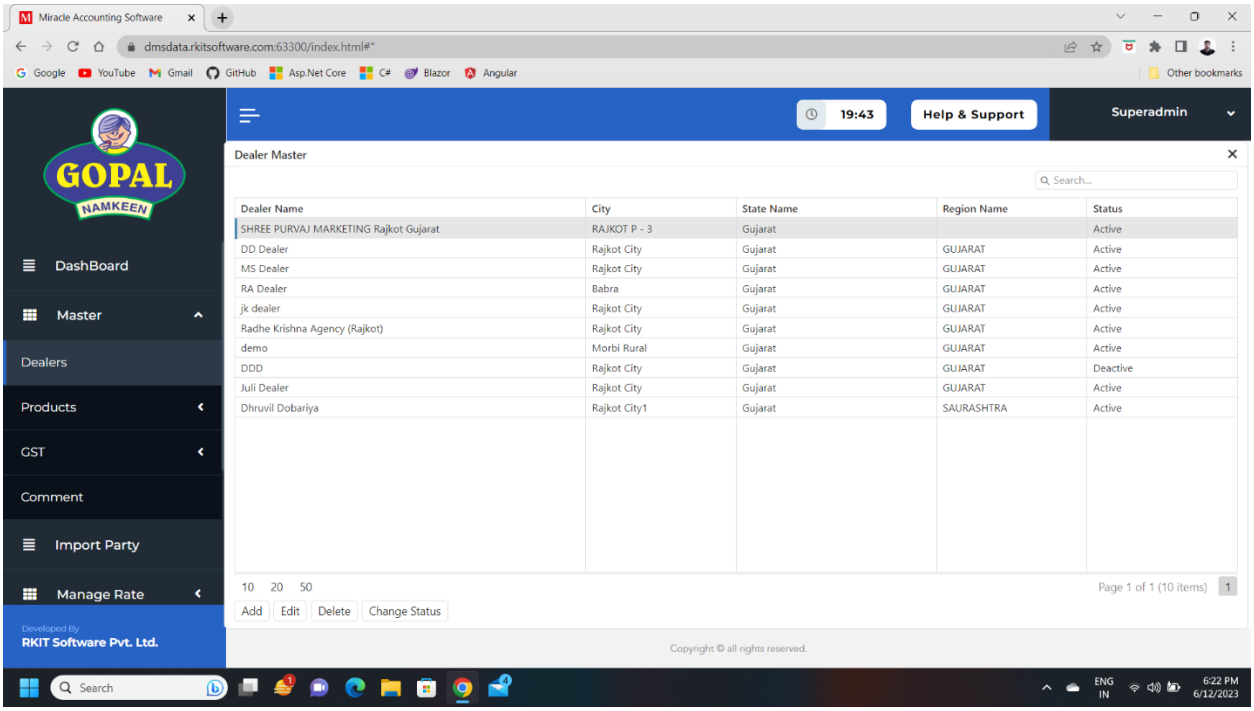

MASTER(SUPERADMIN)

3.1 INTRODUCTION

- In master we have 4 different component,
  - Dealer
  - Product
  - GST
  - Comment

3.2 DEALER MASTER

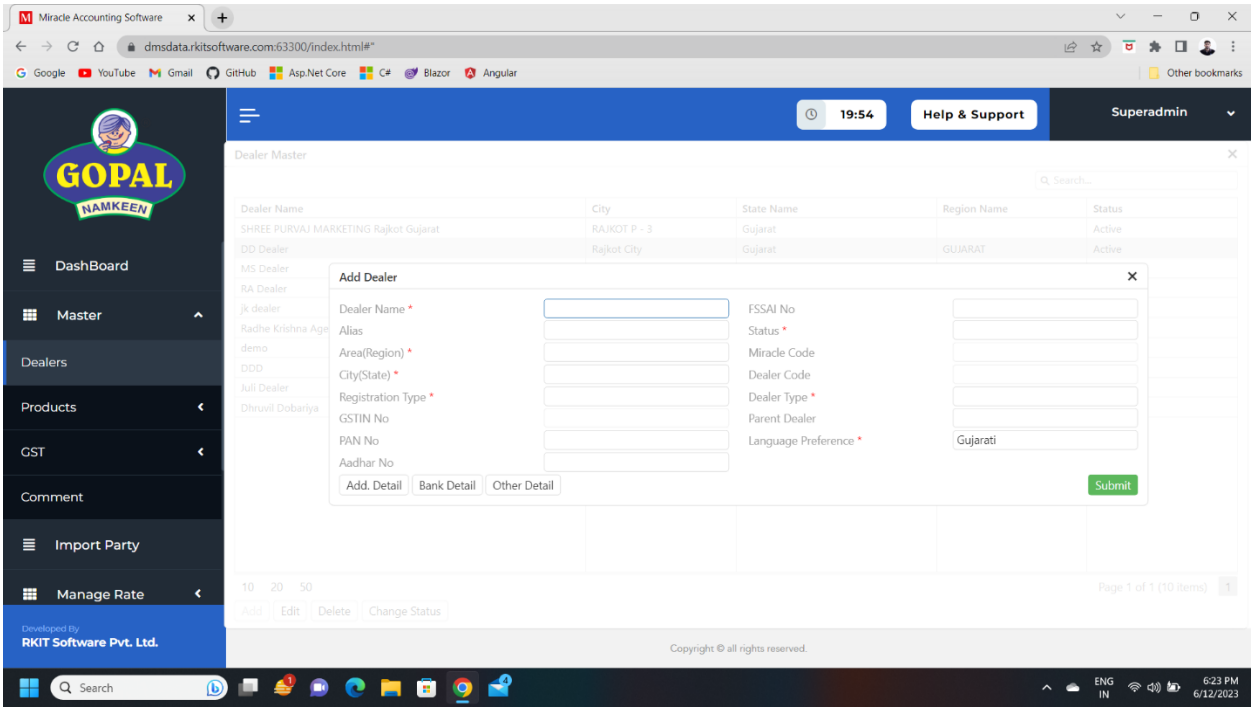

- In this component we can manage different dealers.

- In add or edit dealer, we have various field which contains information about dealer,
- But we have some field which we must know, because it's new for us like,
  - Registration Type
    - Regular
      - Which have GST number and have turnover more than 50 lakh.
      - If we select Regular then we must give GST number.
    - Consumer

- Customer which use product

- Unregistered
  - Retailer which have don't registered for GST and have turnover less the 50 lakh.
- Composition
  - It like regular, but don't follow GST slab and pay GST every one year as per Government rules and have turnover less than 50 lakh.

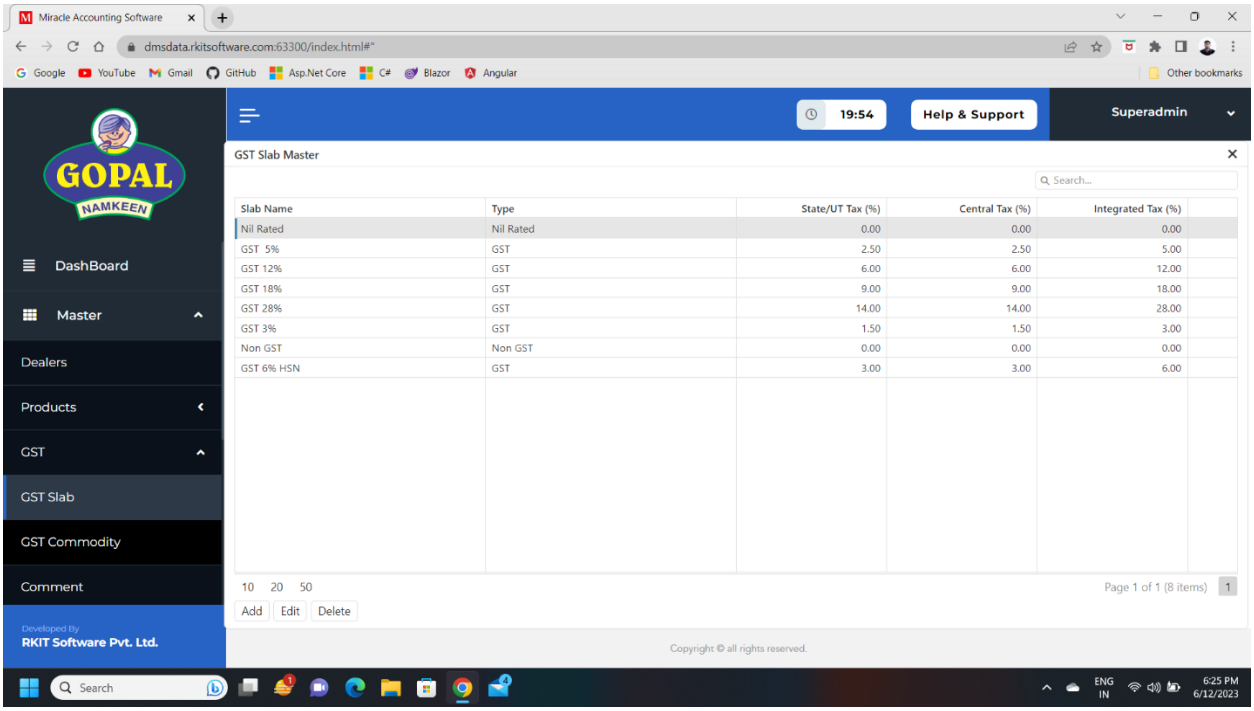

- Dealer Type:
  - Regular
    - It regular dealer which have own agency.
  - Outlet
    - It is branch of company which is directly sell products to customers.
- Parent Dealer:
  - It select if dealer is sub dealer of any agency.
- Miracle Code:
  - It is automatically generated which is used to map dealer to Miracle's dealer.
- Dealer Code:

- It is automatically generated which is used when salesman registered in mobile app at that time they specify dealer code so we can map dealer with salesmen.

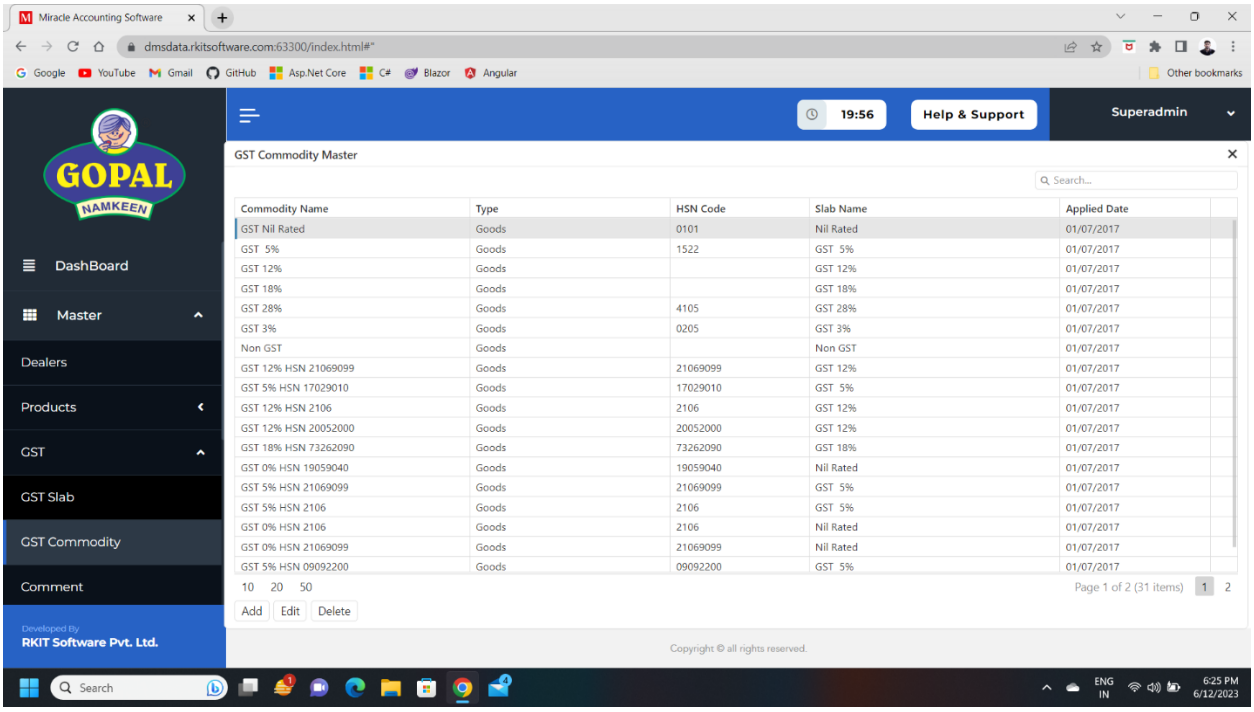

➢ We can also add other details like,
  - Address detail
  - Bank detail
  - Other details

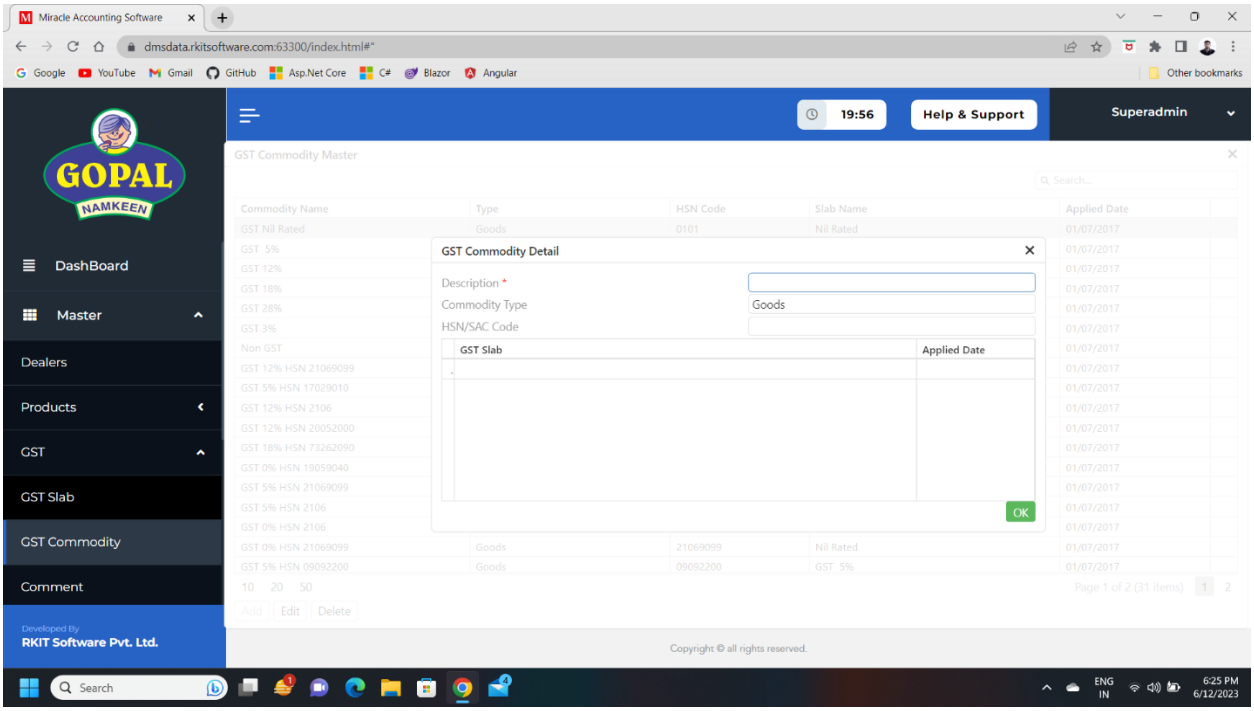

3.3 GST MASTER

➢ GST master contains two component which is,
  - GST Slab
    - In this component we can manage GST Slab.
  - GST Commodity
    - In this component we can manage GST Commodity.
    - It contains different details like,
      - Description
      - Commodity Type
        - Goods
        - Service

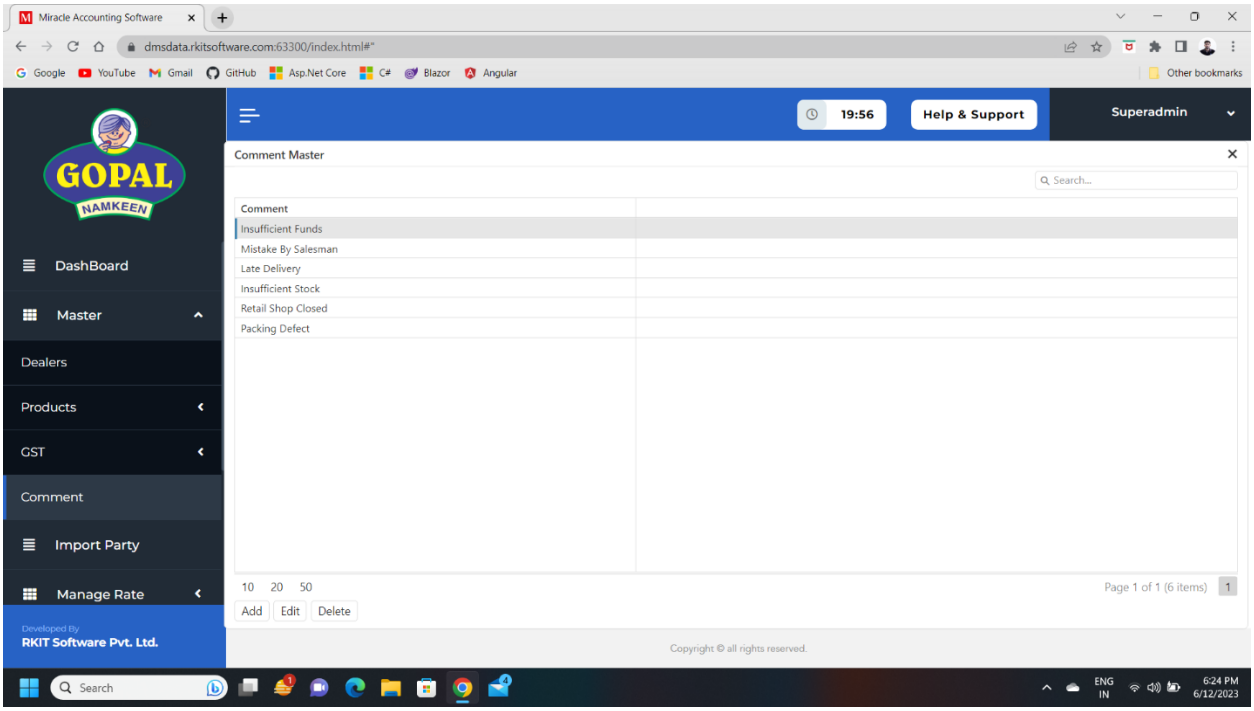

- HSN/SAC Code
- GST Slab
    - How much slab apply on which duration.

3.4 COMMENTS MASTER

- This component used for save comments.

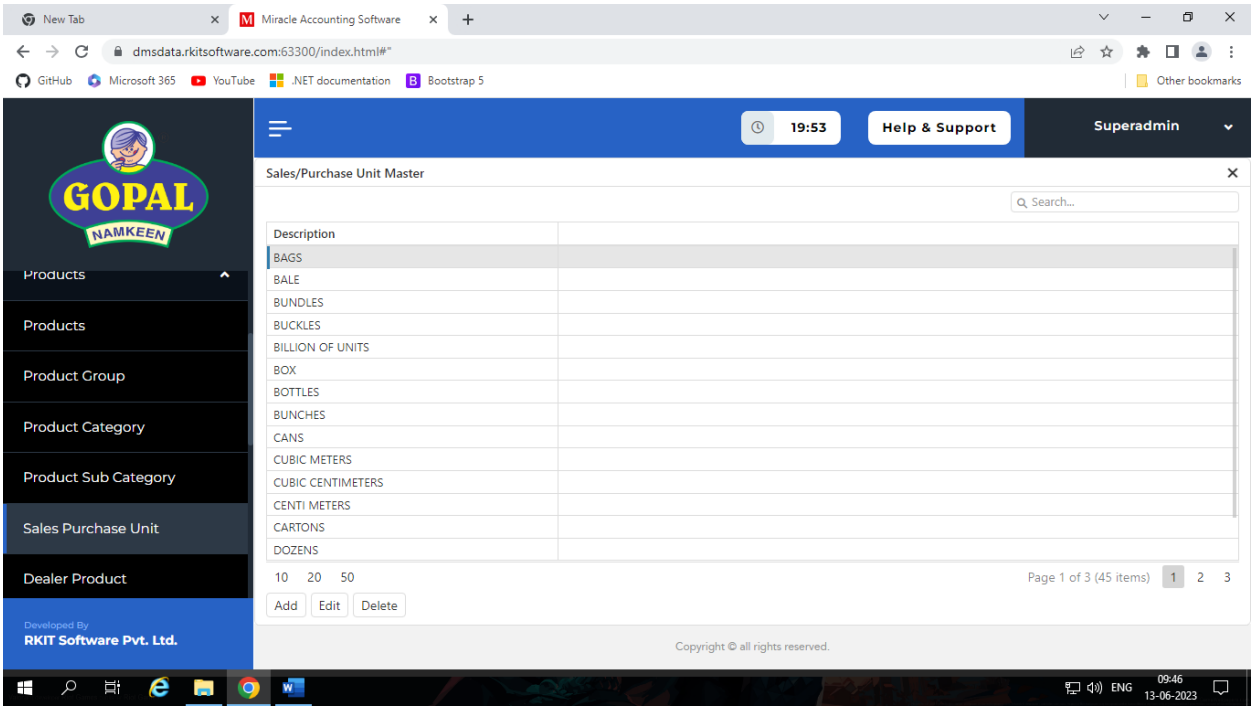

- These comment are used we some issues arrive during delivery life cycle of product, like,
  - Insufficient Funds
  - Mistake By Salesman
  - Late Delivery
  - Insufficient Stock
  - Retail Shop Closed
  - Packing Defect
- It used by salesman during punch order.

3.5 PRODUCT MASTER

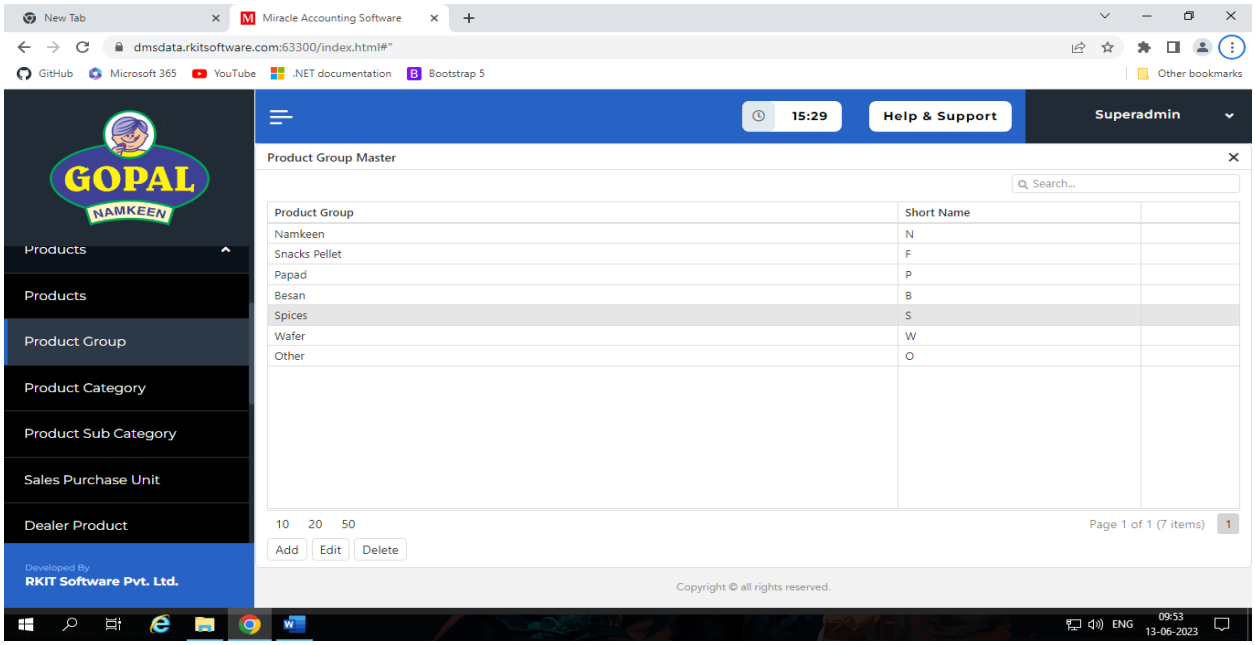

- In this master we have 6 component,
  - Product
  - Product Group
  - Product Category
  - Product Sub Category
  - Sales Purchase Unit
  - Dealer Product

Sales Purchase Unit:

- This component contains different types of unit which we use for sales and purchase product.

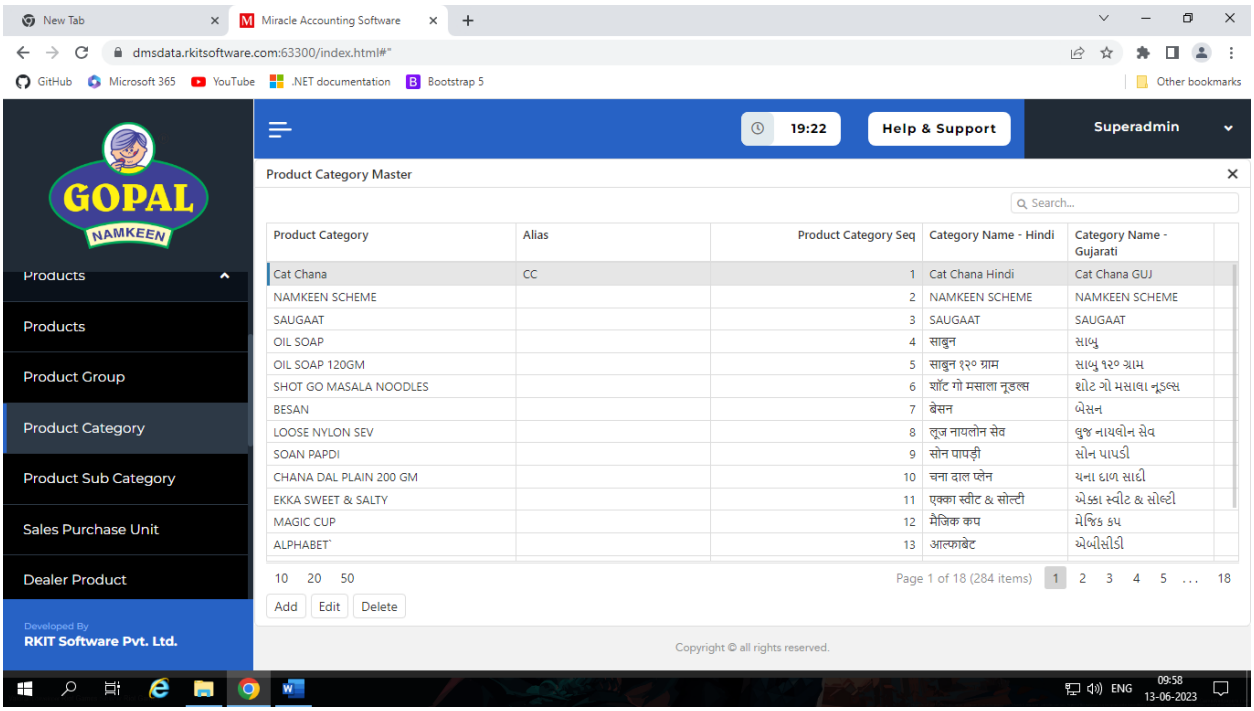

Product Group:

- This component contains details about type of product, it's short names of type and sequence, like, Namkeen, Snacks Pellet, Papad, Besan, Spices, Wafer and Other.

Product Category:

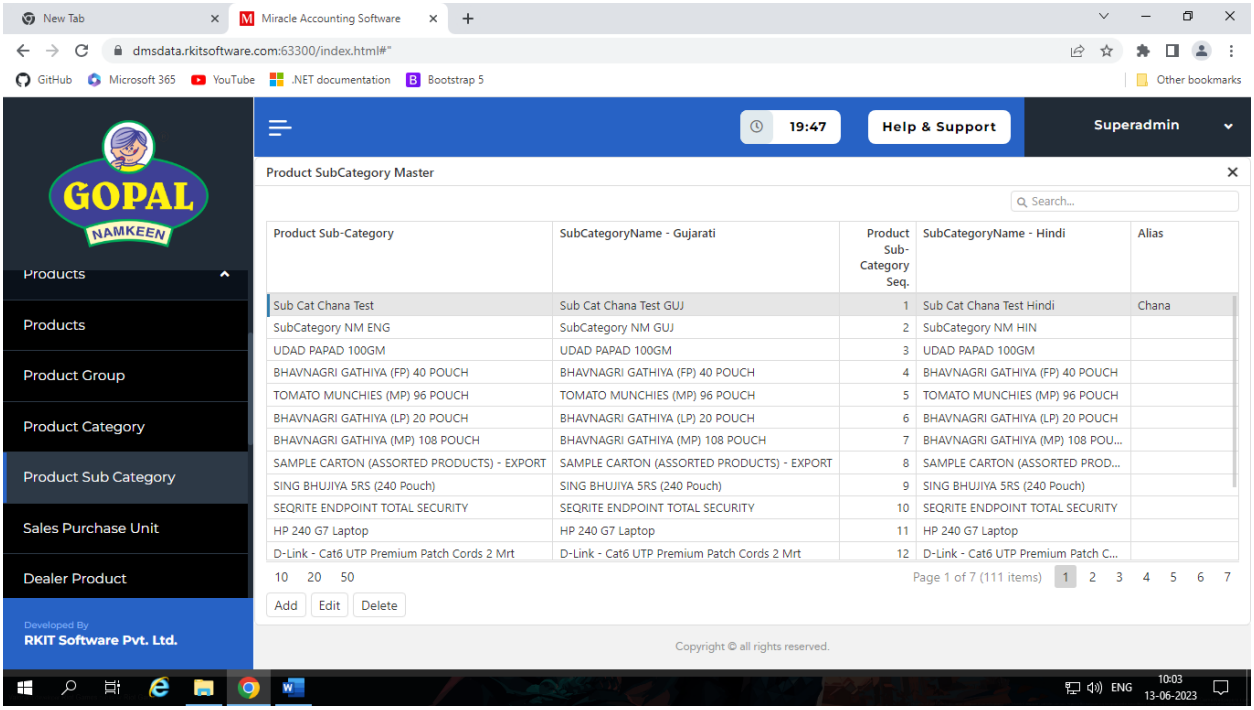

- It contains different type of category of product, in other word it is name of product like, Chana dal, Sev mamara, Kurkure…..

- In add-edit section we have different types of fields like,
  - Product Category Name
  - Alias
  - Sequence
  - Category Name – Gujarati
  - Category Name – Hindi
  - Product Group
  - Is Loose Product
    - It Yes , then dealer can sale this product as loose product

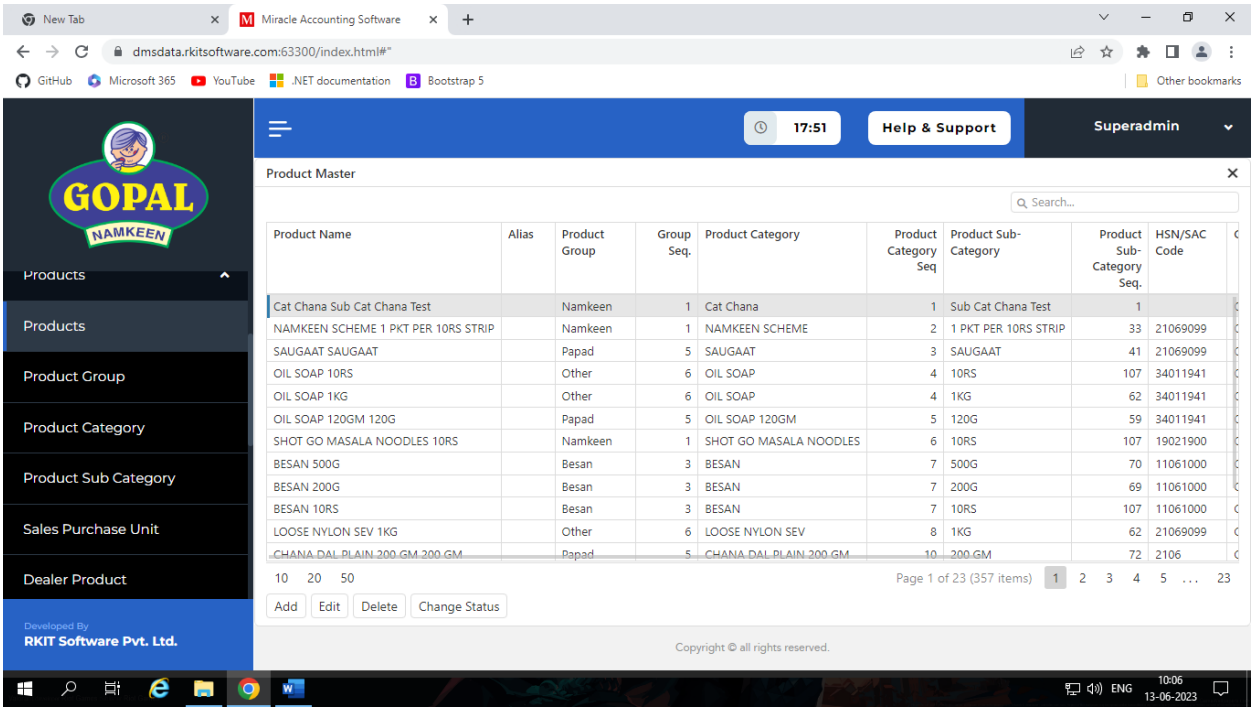

Product Sub Category:

- This section contains sub category of product like, 10 gram pack, 20 RS pack, 1KG pack…

Product:

- This section contains details about product, like, Chana dal 10 RS, Chana dal 20 RS, Sev mamara 100 gram…

- In add-edit mode we have different type of field like,
  - Miracle Code
  - Product Name
    - It created by combination of Product Category and Product Sub Category
    - Ex: We select Product Category “Chana dal” and Product Sub Category “10 RS Pack”, Then Product Name should be “Chana dal 10 RS Pack”.
  - Status
    - Active / De - Active
  - Commodity
  - Purchase Rate
  - Sales Rate
  - Purchase Unit
  - Sales Unit
  - Conversation Factor
    - It use to maintain stock of product like,
    - Ex: We have one Box of product which contains 10 strip and each strip contains 10 packs.
    - So if dealer sales as box then conversion factor is 1, so stock = stock * 1
    - So if dealer sales as strip then conversion factor is 10, so stock = stock * 10
    - So if dealer sales as packs then conversion factor is 100, so stock = stock * 100
  - Allow half strip
    - If yes the dealer can sale product in half strip.
  - Miracle Code:
    - It is used to map product with ERP system.

Dealer Product:

- In this section we can see details of dealer with their products which we are assign.

SETUP(SUPERADMIN)

4.1 INTRODUCTION

- In this section we have three components which is,
  - Company Setup
  - Voucher Setup
  - User Security

4.2 USER SECURITY

- In this section we have three components,
  - User
  - User Group
  - User Right

User:

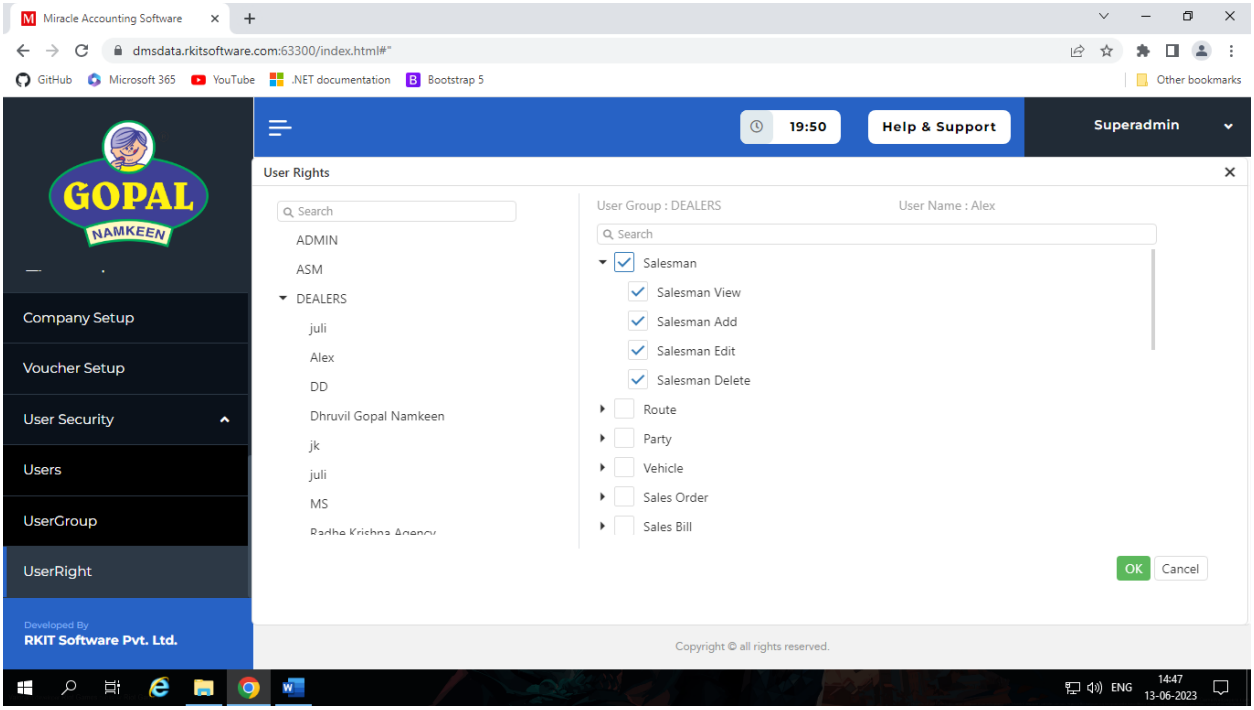

- It is used to create user.
- It contains different types of fields like,
  - User Name
  - Login Name
  - Password
  - User Group
  - Status
    - Active / De – Active
  - Dealer
    - Select this credential assign by which user.

User Group:

- It is used to manage user groups, in other word user type.
- It contains different types of fields like,
  - User Group Name
  - Is Super Group
    - If yes, the it have admin rights.

User Right:

- In this section we can manage user rights.

4.3 COMPANY SETUP(PENDING)

4.4 VOUCHER SETUP(PENDING)

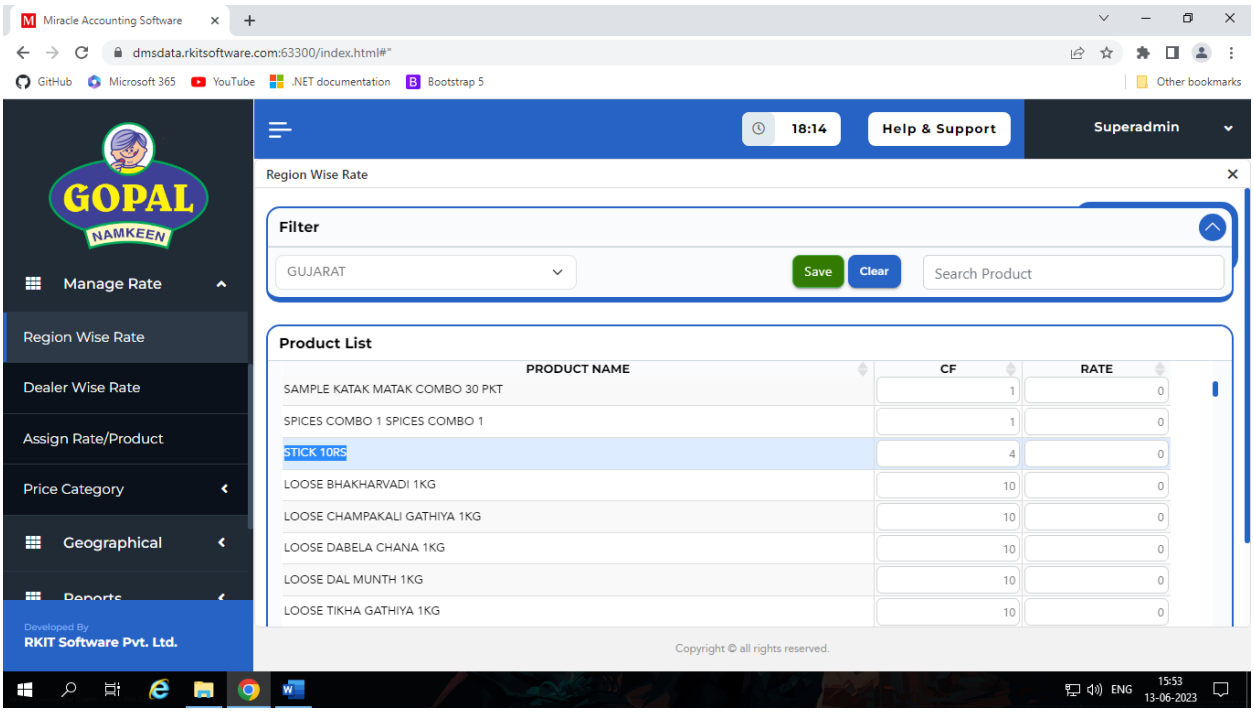

MANAGE RATE(SUPERADMIN)

5.1 INTRODUCTION

- In this section we have four components,
  - Region wise rate
  - Dealer wise rate
  - Assign Rate/Product
  - Price Category

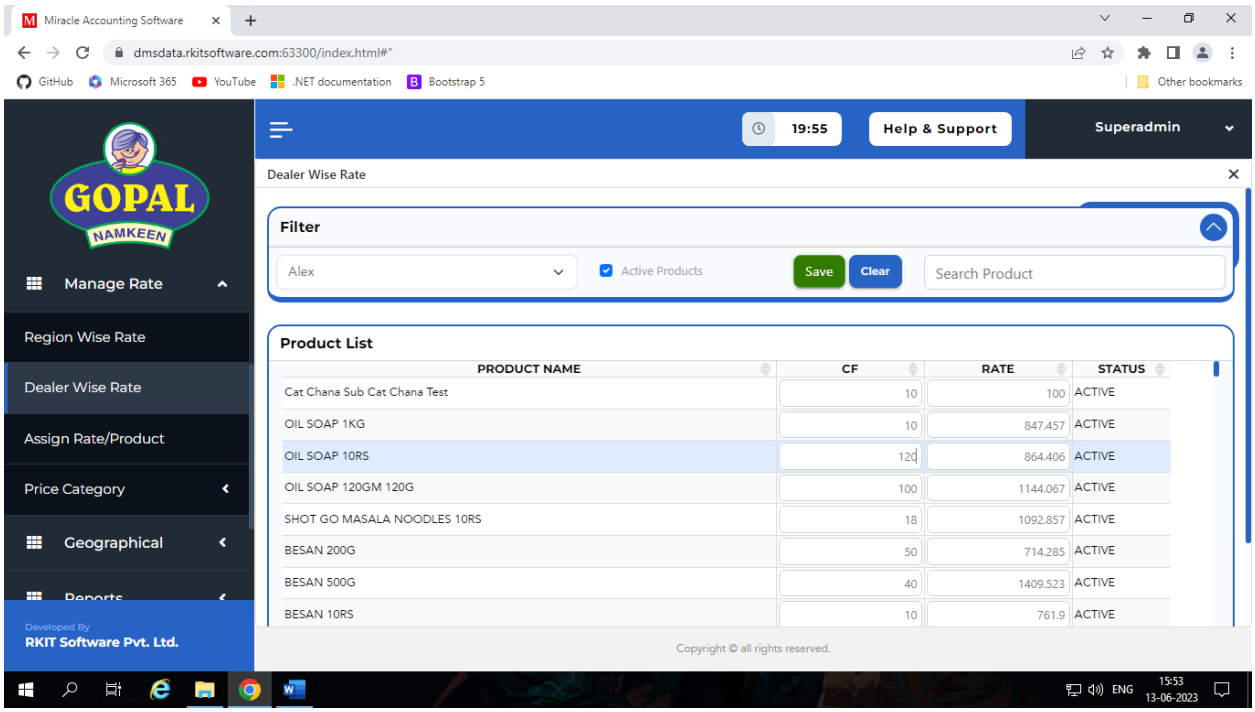

5.2 REGION WISE RATE

- In this component we manage region wise rate.

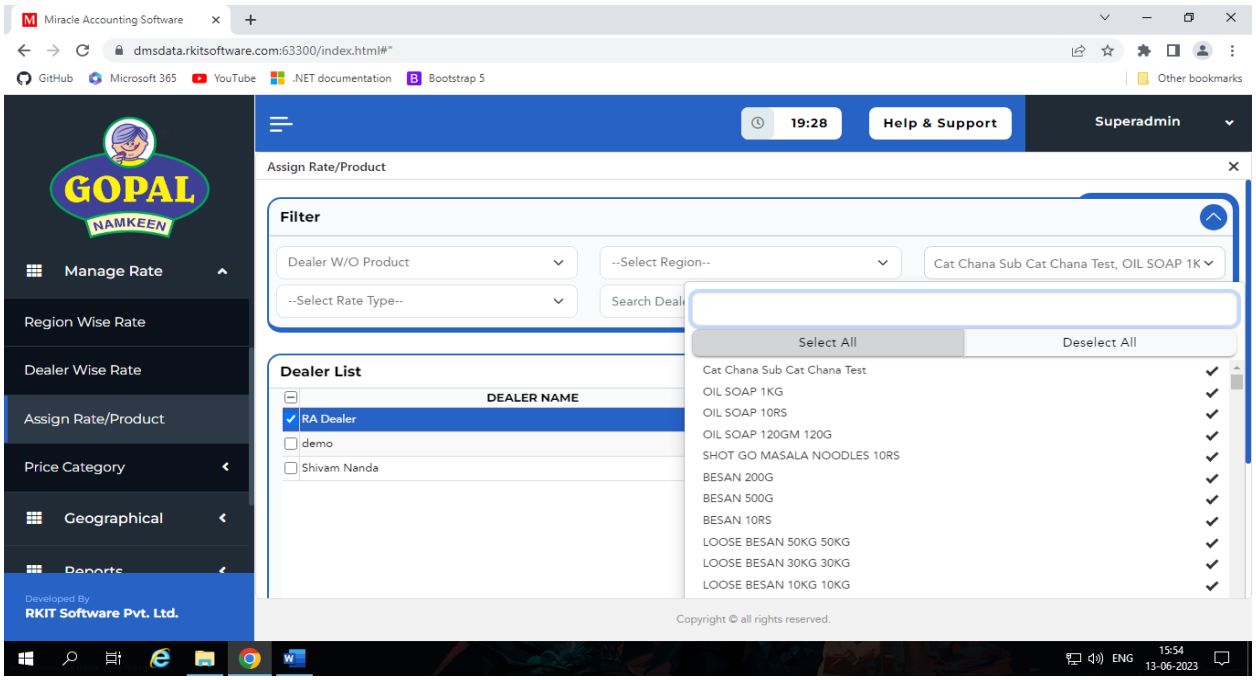

5.3 DEALER WISE RATE

- In this component we manage dealer wise rate.
- Dealer wise rate have more priority then region wise rate.
- So if we don't assign dealer wise rate then and only then region wise rate give effect else dealer wise rate give effect on product rate.

5.4 Assign Rate/Product

- In this component we can assign product to particular dealer or all dealer, in other word we can specify which dealer can sale which products.

5.5 Price Category

- It contains three different components,
  - Zone
  - Region
  - Area
- It helps use to manage price list on region.

Zone:

- Zone means state that contains different regions.
- Ex: Gujarat, Maharashtra, Goa, Delhi…

Region:

- Region means different part of state which contains different areas.
- Ex: Saurashtra Nort Gujarat, South Gujarat, Kachchh, Middle Gujarat…

Area:

- Area contains different part of regions.
- Ex: Rajkot City, Rajkot Ruler, Ahmedabad City…

GEOGRAPHICAL(SUPERADMIN)

6.1 INTRODUCTION

- It is help us to manage different geographical details in every entity like dealer, product and other.
- It contains five component,
  - Country
  - State
  - District
  - Taluka
  - City

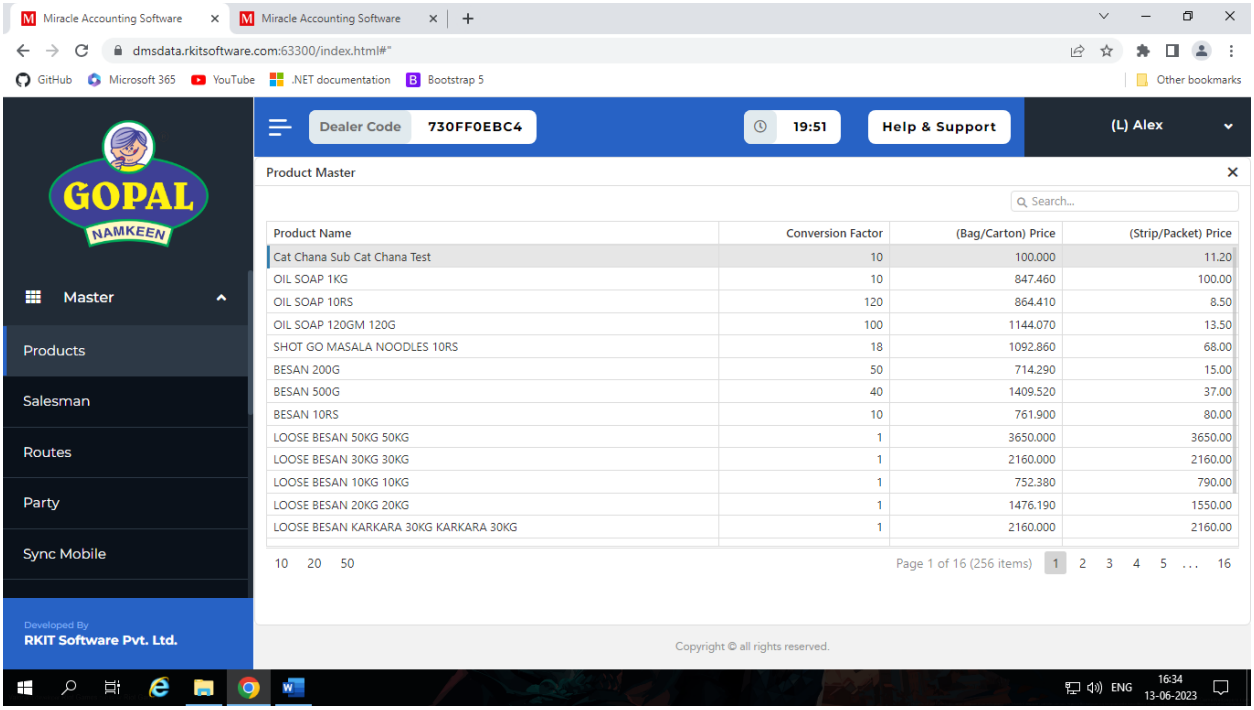

MASTER(DEALER)

7.1 INTRODUCTION

- In this section we have eight types of different component which is,
  - Product
  - Salesman
  - Route
  - Party
  - Sync mobile
  - Transport
  - Change Party Name

7.2 PRODUCT MASTER

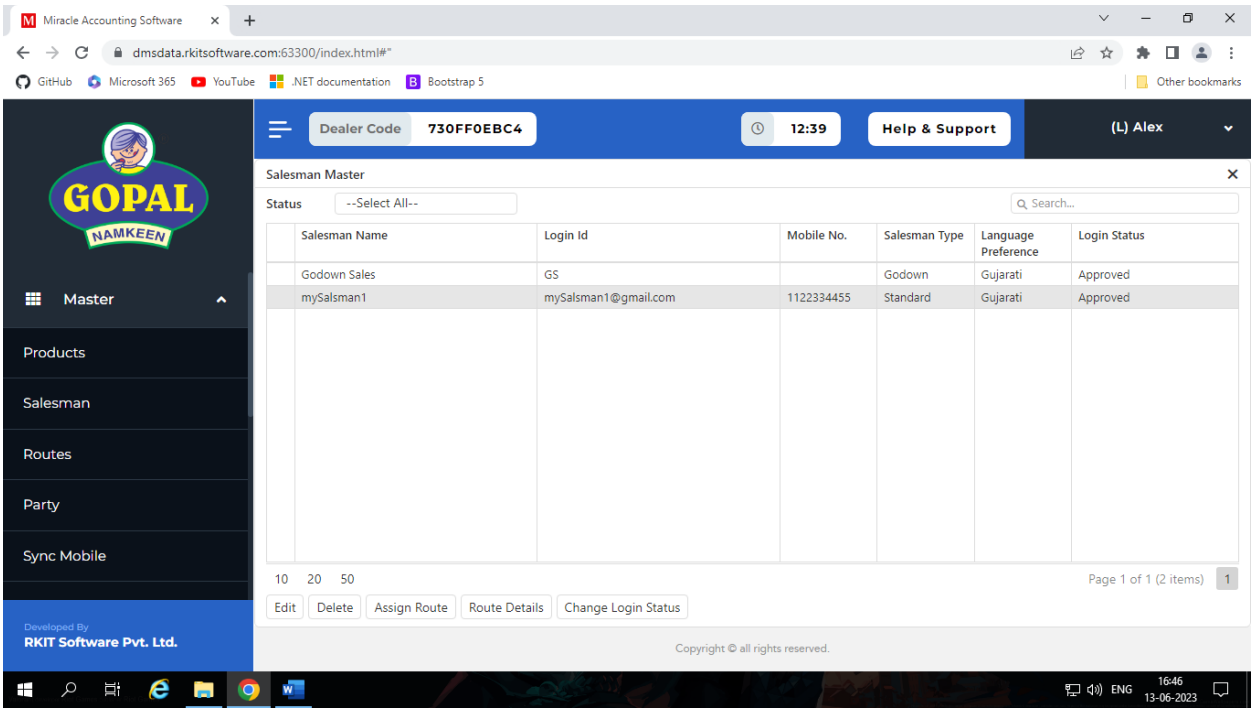

- In this section we can see that which are the product we have assign by supper admin to sale.

7.3 SALESMAN MASTER

- In this section we can manage salesman.

- When salesman registered from mobile app at that time we can see here their details and we can change login states.
- We have three types of login states,
    - Approved
        - When we approved login state after salesman can logged in in application.
    - Pending
        - This state is by default when salesman registered in mobile app.
    - Suspend
        - It is used when we want to suspend salesman.
- We also can assign routes and see the their routes details.

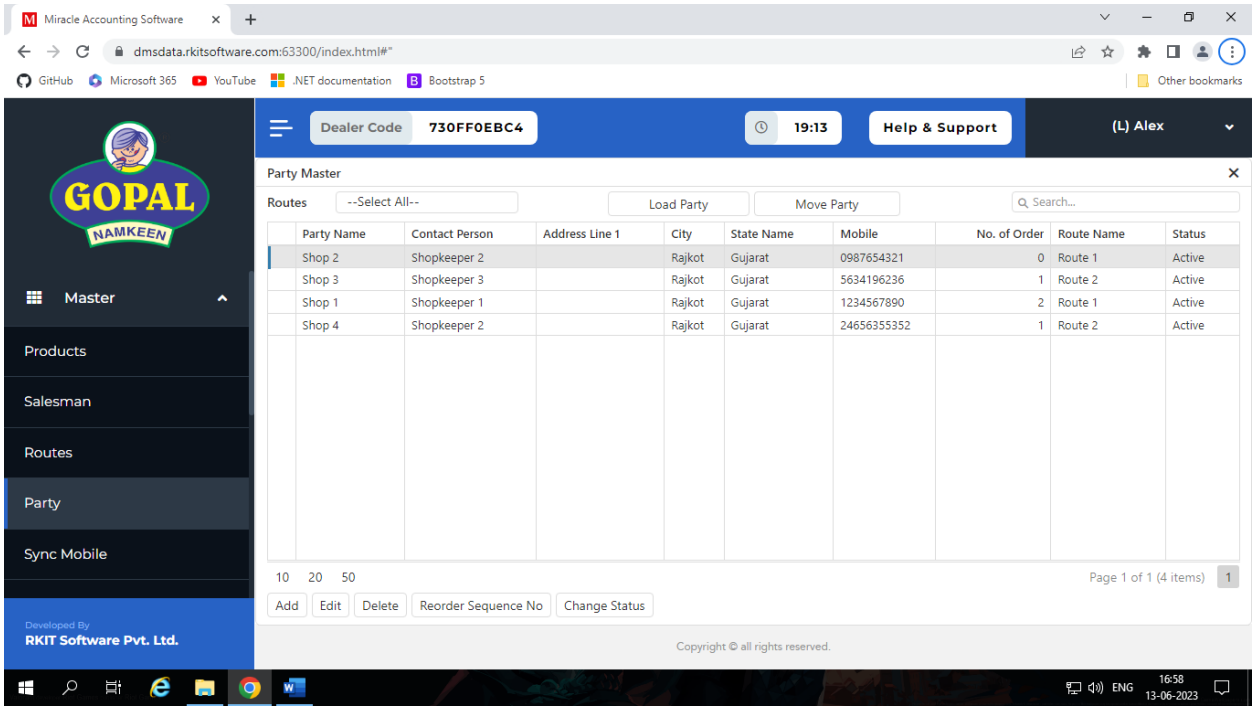

7.4 Route Master

- In this section we manage different route where our retails exists.
- We can view parties of route.
- We also can assign days of route, it helps use to show route to salesman on particular day not show whole week.
- In add-edit we have different options like,
    - Route Name
    - Description

- Status
- Is Synced in Mobile App
  - If yes the it will sync with mobile app.

7.5 Party Master

- In this section we can manage different parties of our dealer, in other world we mane our retailer shops.

- In add-edit we have different types of fields like,
  - Party Name
  - Contact Person
  - Address Line 1, 2 and 3
  - PinCode
  - City
  - State
  - Gujarat
  - Mobile No
  - Registration Type
    - Regular
    - Consumer

        - Unregistered
        - Composition
    - GSTIN No
        - If we select regular registration type
    - Food Licence No
    - Status
        - Active / De - Active
    - Shop Open Time
    - Shop Close Time
    - Route
        - This party exists in which route
    - Sequence No.
        - It is used to provide sequence shop, so salesman can know that which order of turn of shop they want to follow.

7.6 Sync Mobile(Pending)

7.7 Transport(Pending)

7.8 Change Party Name(Pending)

7.9 Vehicle(Pending)

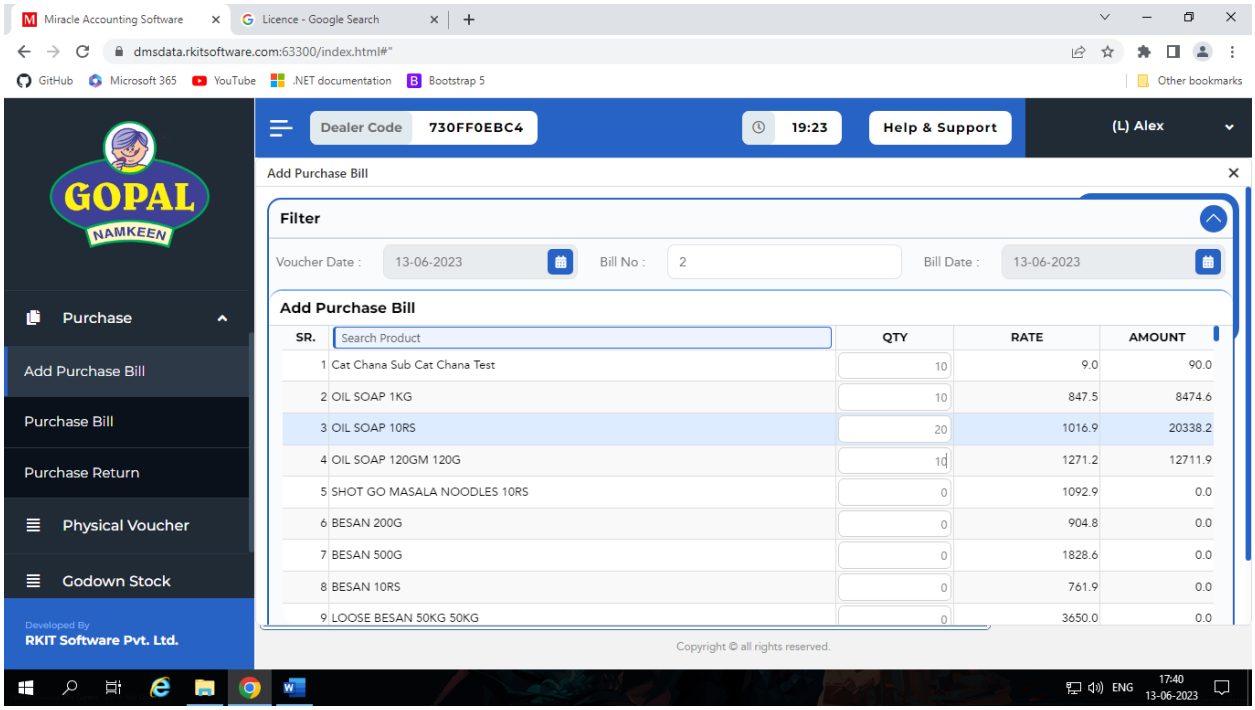

PURCHAS(DEALER)

8.1 INTRODUCTION

- In this section we have three types of component which is,
  - Add Purchas Bill
  - Purchas Bill
  - Return Purchase

8.2 ADD PURCHASE BILL

- In this section we can order stock of products.

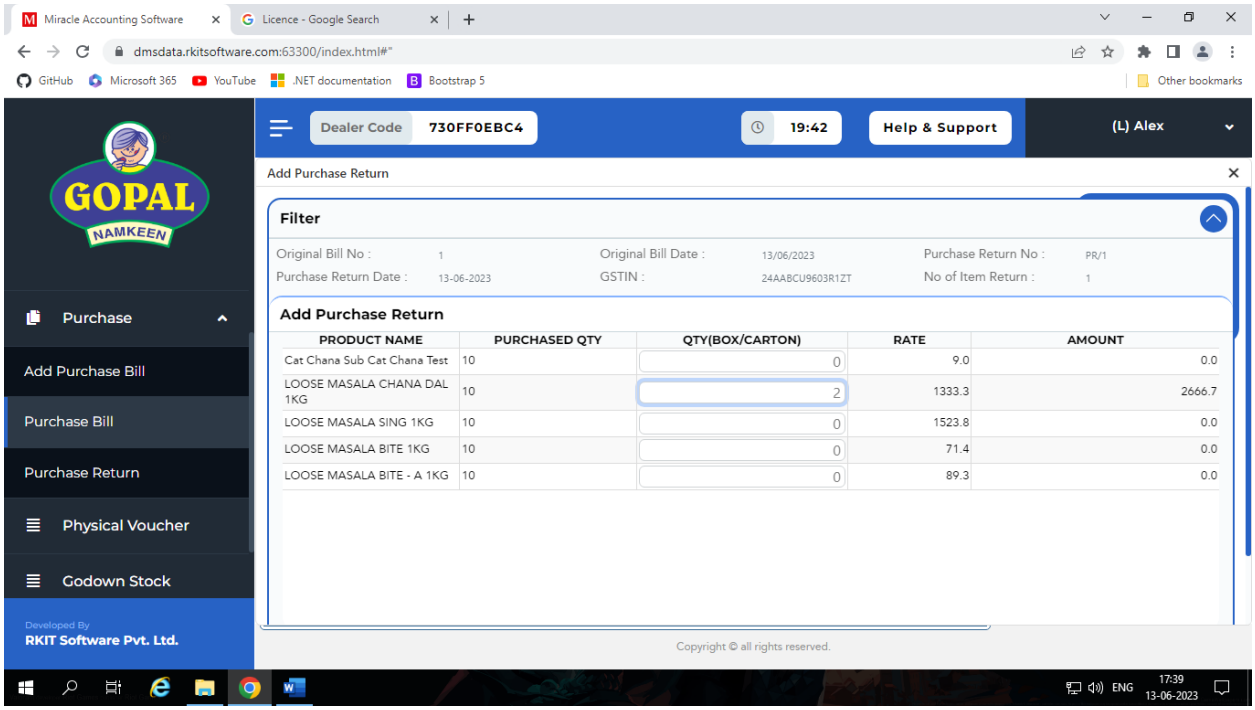

- After we order something it's order bill is show in Purchase Bill section.

8.3 PURCHASE BILL

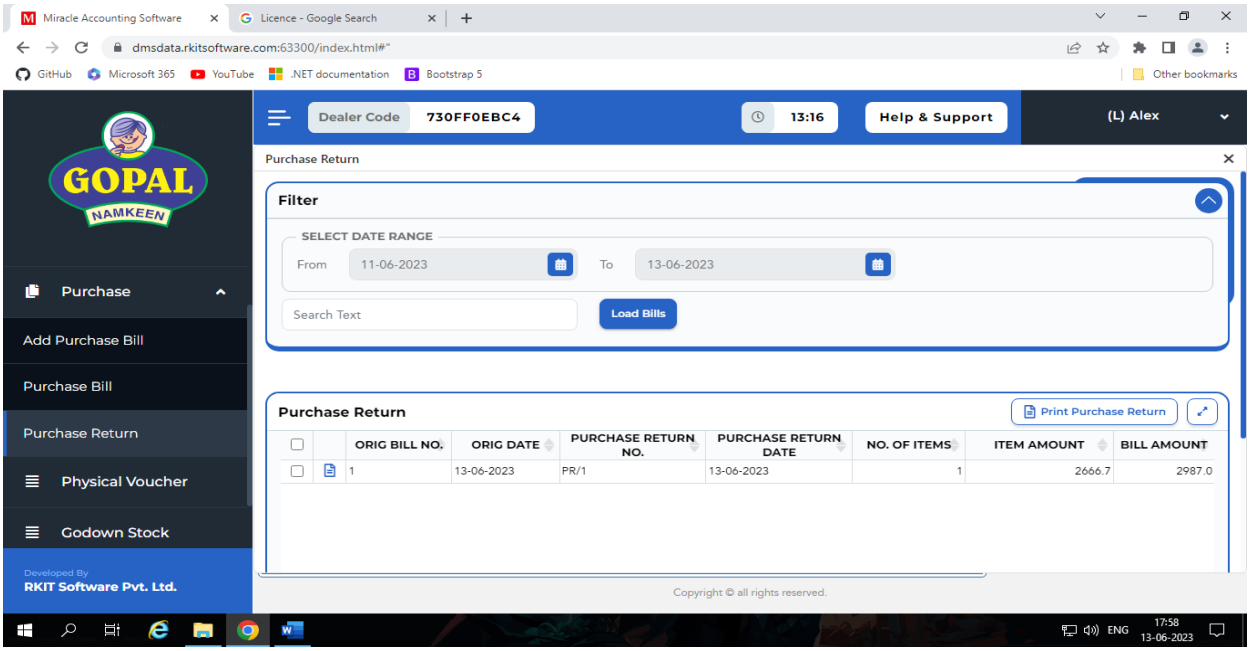

- In this section we have bill of orders.
- By default all Bill status is Pending, when our order is delivered by company at that time we should approve purchase bill and after approve purchase bill, our stock is increased as per order item.
- Stock don't increase until we approve purchase bill.

- Second thing that we have is Bill Return, which is used to return particular stock.
- When we return some item for what evert reason at that time one entry add in Purchase return section and decrease stock from our inventory.
- Also every order only can generate return bill only once.

8.4 Purchase Return

- In this section we can see all the purchase return bills.

SALES(DEALER)

9.1 INTRODUCTION

- In
